PROFESSIONAL SUMMARY

Backend Engineer specializing in **building systems that scale and shipping products that last**. Over the past 2 years, I've taken backends from greenfield architecture to production — owning API design, database performance, infrastructure, and deployment pipelines end-to-end — always focused on **solving the business problem behind the code**, cutting operational errors, accelerating workflows, and keeping systems resilient under real-world load across AI and SaaS products.

WORK EXPERIENCE

- **Backend Engineer** February 2026 – Present
Zedny Inc. *Cairo, Egypt (On-site)*
 - **Developing scalable backend services using FastAPI** within a structured **layered architecture**, designing and implementing RESTful APIs that ensure maintainability, modularity, and clear separation of concerns across application layers.
 - **Optimizing API performance and request-response cycles** by implementing caching strategies, improving database query efficiency, and designing high-performance endpoints to reduce latency and improve system throughput.
 - **Leveraging Supabase (PostgreSQL) and LangGraph** to build data-driven backend services and orchestrate intelligent workflows, enabling reliable integrations and scalable backend infrastructure for modern AI-powered applications.
 - **Architecting and deploying a production-grade observability stack** using **Grafana, Loki, and Promtail**, enabling real-time log aggregation, structured API latency tracking, and proactive anomaly detection — reducing mean time to detection (MTTD) and driving targeted performance optimizations across critical service endpoints.
- **Backend Engineer** September 2024 – January 2026
Nexxora Holding Ltd. *Remote*
 - **Owned greenfield backend architecture** for DigiTee AI — designing a **service-oriented Python/Django platform** with **secure, extensible APIs** enabling rapid integrations across partner and financial gateways.
 - **Delivered measurable business impact** through QR-driven dashboards (**28% fewer manual errors**), checkout optimizations (**25% conversion lift**), and frontend performance gains (**35% faster image loads, 20% organic traffic growth**).
 - **Integrated payments, communication, and automation** via PayPal, QNB, Stripe, MoonPay, Twilio, and X APIs — ensuring fault-tolerant, secure, and scalable third-party service architecture.
 - **Led NFT marketplace backend (DigiTee.io)** with dual authentication (MetaMask + email) and fiat-to-crypto payment flows, supporting real-time digital asset transactions at scale.
 - **Managed GitLab CI/CD pipelines** and cross-functional alignment with AI, cybersecurity, and animation teams to deliver secure, tested, continuously deployed code.

EDUCATION

- **Assiut University, Faculty of Computers and Information** October 2020 – July 2024
Bachelor's in Computer Science (GPA: 3.46 / B+ – Very Good) *Assiut, Egypt*

PROJECTS

- **Aleem Educational Platform | aleemgames.com** February 2026 – Present
SaaS Learning Platform for Schools *Django, PostgreSQL, Docker*
 - **Architected a multi-tenant SaaS platform** with **role-based access control** for administrators, teachers, and students, integrating **PayPal subscription billing** and operational admin dashboards for user and subscription management.
 - **Deployed and maintained production infrastructure** on **DigitalOcean** using Docker, Nginx, and PostgreSQL with SSL termination and CI/CD workflows.
- **Shalan's Humanitarian Medical Aid | shmaid.org** December 2025 – January 2026
Full-Stack Donation & Medical Aid Platform (Freelance) *React, Django, PostgreSQL*
 - **Built end-to-end full-stack platform** with React and Django REST Framework, implementing **PayPal donation flows**, medical aid request workflows, and role-based admin features.
 - **Owned deployment and infrastructure** on Contabo with CI/CD pipelines, secure data handling, and reliable production operations.

SKILLS

- **Programming Languages:** Python, SQL
- **Frameworks:** Django, Django REST Framework, FastAPI, Flask, LangGraph, SQLAlchemy
- **Databases and Backend Platforms:** PostgreSQL, MySQL, MongoDB, Redis, Supabase
- **Cloud and DevOps:** Docker, Kubernetes, Git, GitLab CI/CD, AWS (EC2, Monitoring, Deployment), DigitalOcean, Nginx, Linux
- **Message Brokers and Caching:** Redis, Celery, RabbitMQ
- **Monitoring and Observability:** Grafana, Prometheus, Loki, ELK Stack (Elasticsearch, Kibana), Sentry
- **Testing and Code Quality:** Pytest, Black, isort, Flake8, Pre-commit Hooks

EXTRACURRICULAR ACTIVITIES

- **TECH Member** June 2022 – Present
Google Developer Group *Assiut, Egypt*
 - **Organized 5+ community events** reaching **1500+ students and developers**, demonstrating excellent communication skills and leadership while promoting learning in modern technologies including web development and software engineering.
 - **Delivered technical sessions on software development**, increasing attendees' project completion rates by **30%** based on surveys, sharing knowledge and fostering practical skill development in Python, Django, and best practices.

LANGUAGES

- **Arabic:** Native
- **English:** Professional Working Proficiency
